

Fast Reactor Designing Study for Proliferation Resistance and Physical Protection Enhancement

Pedro Junior Vicente Valdez

SAGARA-Laboratory

Laboratory of Advance Nuclear Energy

Tokyo Institute of Technology Summer Program

Research Plan and Objectives

- MCNP4 particle transport code
 - Critical mass and heat content calculations
 - Neutron transport calculations
 - Nuclear material attractiveness methodology
- Research on fast spectrum reactor designing for Minor Actinides (MA) transmutation and for High Proliferation Resistance.
- Neutronics analysis of a Fast Spectrum Reactor core design:
 - Reactivity and burnup calculation by the combination of a 2-D deterministic code, SLAROM-JOINT-CITATION, for full scale fast spectrum core designing and performance evaluation
- Learning of the Plutonium (Pu) fuel cycle in Japan. This will include the research of the underlying physics of the Pu fuel cycle.

Important Definitions:

- Proliferation Resistance

- is that characteristic of an NES that impedes the diversion or undeclared production of nuclear material or misuse of technology by the Host State seeking to acquire nuclear weapons or other nuclear explosive devices.

- Physical Protection

- is that characteristic of an NES that impedes the theft of materials suitable for nuclear explosives or radiation dispersal devices (RDDs) and the sabotage of facilities and transportation by sub-national entities and other non-Host State adversaries.

MCNP4 – Particle Transport Code

Evaluating Material Attractiveness and Safety of the PUREX process

Schematic diagram of an implosion bomb similar to the one designed by Iraq

Evaluating Material Attractiveness

Material : bare Pu-Metal, Pu-239, Pu238

Mass density: Pu-metal 15.80g/cc

with delta-phase

Rossi-alpha:

$$\alpha = \frac{k-1}{l}$$

$$ATTR = \frac{\left(\frac{\alpha(\infty,1)}{\alpha^{239}(\infty,1)}\right)^{n=1,2,3}}{\frac{DH_{CM}}{DH_{CM}^{238}} + \frac{SN_{CM}}{SN_{CM}^{238}} + \frac{RD_{CM}}{RD_{CM}^{238}}}$$

Attractiveness (Decay Heat)

Isotope	Decay heat (W/kg)	SN (n/g/s)
²³⁸ Pu	567	2660
²³⁹ Pu	1.93	0.0226
²⁴⁰ Pu	7.06	1030
²⁴¹ Pu	3.4	0.0493
²⁴² Pu	0.12	1720

Isotope	radius (cm)	mass (kg)	k-inf	l (abs)	alphaN	decayN	ATTR	ATTR(N)
238	5.96	14.01	2.81324	1.27E-08	0.96	1.00000	0.9627619	0
239	6.22	15.93	2.95061	1.31E-08	1.00	0.00387	258.4596560	1
240	9.02	48.57	2.23078	4.57E-08	0.18	0.04316	4.1926093	0.012543

242	11.3	95.50	1.9642	7.68E-08	0.08	0.00144	58.5002960	0.223449

Criticality Safety of Chemical Process in Pulse column

Material : Pu and U in solution

Mass density: Water solution, fix with 1.0g/cc

Pulse Column: Variable Diameter (cm), infinite column

Parameters: Pu density, U-Pu composition

Material Form	radius (cm)	k-eff
Pu(-0.2)	27.8	1.00095
Pu(-1.0)	13.4	0.99959
PuU (0.72/7.2)	21.44	0.99954
PuU (0.36/7.2)	28.75	1.00049
PuU (0.5/8)	25.18	1.00018

SLAROM-JOINT-CITATION

Nuclear Reactor Core Analysis Code

-  Inner Core Fuel
-  Outer Core Fuel
-  Radial Blanket
-  SUS Shielding
-  Zr-H Shielding
-  Primary Control Rods
-  Backup Control Rods

Japan Sodium-cooled Fast Reactor (JSFR)

Item	Unit	Specification
a. Plant		
Reactor thermal power	MW _{th}	3570
Coolant temperature (inlet/outlet)	°C	395/550
Fuel/colant/structure	wt.%	43.9/30.3/25.8
Subassembly pitch	mm	206.0
b. Fuel		
Fuel material		TRUO ₂ -UO ₂
Pu enrichment in HM (inner core/outer core)	wt.%	18.3/20.9
²³⁵ U enrichment	wt.%	0.2
Refueling patern		four-batch
Irradiation time per one batch	day	800
Core diameter/core height	m	5.38/1.0
c. Blanket		
Blanket fuel material		UO ₂
²³⁵ U enrichment	wt.%	0.2
Pattern of fuel exchange		four-batch
Thickness of axial blanket (upper/lower)	m	0.2/0.2

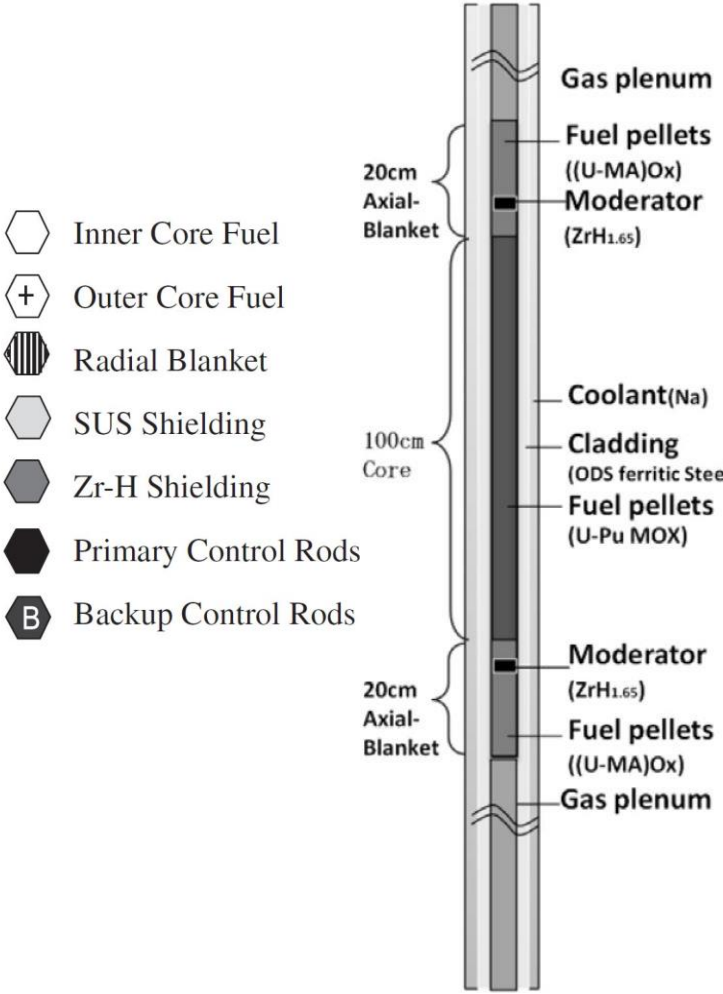

Fig. 1a. Core layout (horizontal view).

(Sagara et al., 2005).

Core design approaches

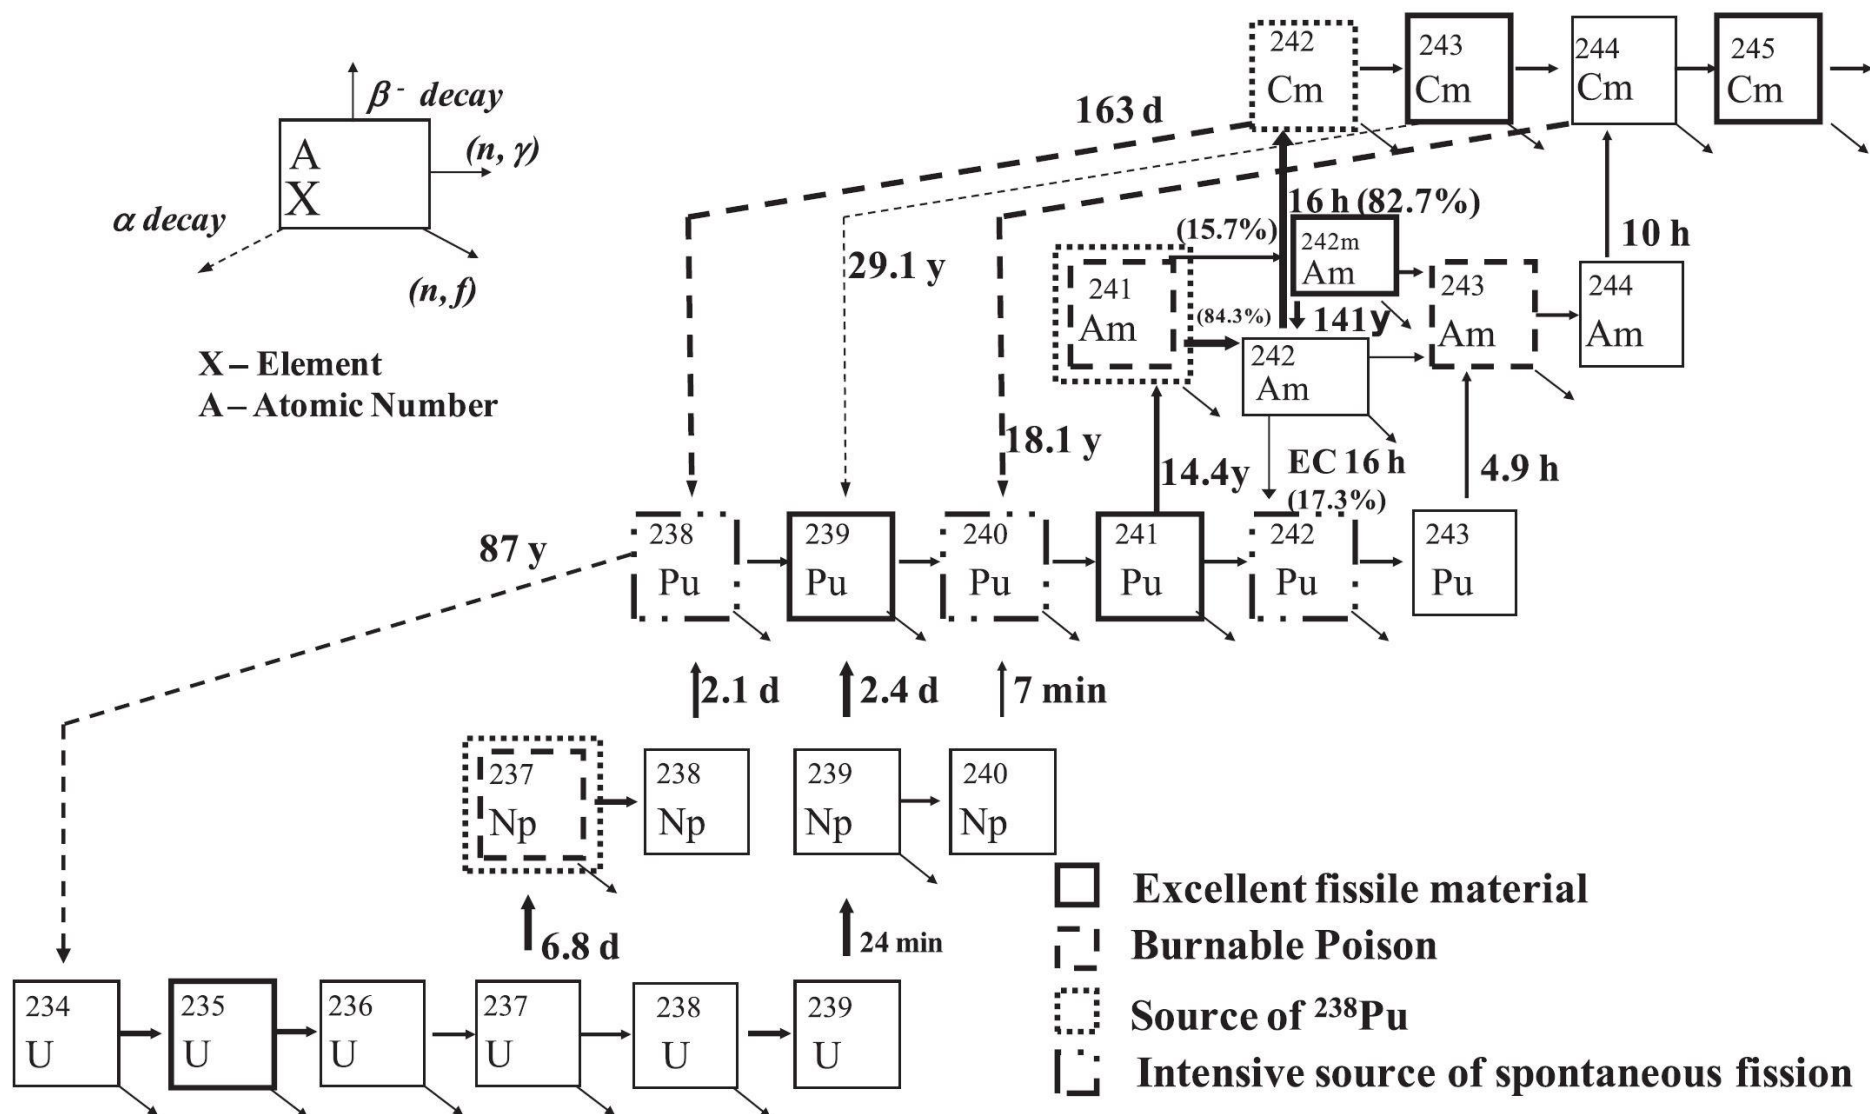

Nuclide	Composition (wt..%)
^{238}Pu	1.1
^{239}Pu	54.1
^{240}Pu	32.1
^{241}Pu	4.3
^{242}Pu	3.9
^{237}Np	0.5
^{241}Am	2.0
^{243}Am	1.0
^{244}Cm	1.0

Research Laboratory Visit

Tsuruga, Fukui Prefecture

Monju Japanese Sodium-Cooled Fast Reactor

Fukui Prefecture

Fast-Spectrum Reactor Characteristics

- Sodium Cooled
- MOX-fueled
- Loop-type
- 280 MWe and 714 MWt
- Breeding ratio of 1.2
- Currently undergoing decommissioning process

A photograph of the Fugen Advanced Thermal Reactor in Fukui Prefecture, Japan. The reactor is a large, white, cylindrical structure with a red dome, situated on a hillside. It is surrounded by other industrial buildings and power lines. In the foreground, there is a body of water and dense green foliage. The background shows a forested hill under a cloudy sky.

Fugen Advanced Thermal Reactor

Fukui Prefecture

Fugen Nuclear Power Station, JAEA-4

Advanced Thermal Reactor

- 165 MWe (557 MWt)
- Demonstration reactor
- Pressure Tube Type Core
- Heavy Water Moderator
- Boiling Light Water Coolant

World Politics and Nonproliferation in the Nuclear Age

A photograph of a nuclear power plant at night. The scene is dominated by a large, white, hyperboloid cooling tower on the left, which is illuminated with red lights along its top edge. To its right, there are several other structures, including a tall, thin chimney and a large, rectangular building. The entire facility is lit up with various lights, including yellow and green ones. The lights are reflected in a body of water in the foreground, creating a shimmering effect. The sky is dark with some clouds. The word "Questions?" is written in white, sans-serif font in the center of the image.
